

## Purpose of application

The purpose of this application is to make a platform for Armenian businesses to present their products in one place, which will make the shopping experience more comfortable for both customers and enterprenuars.

The platform gives companies following functionality

- present their new products,
- update existing ones,
- delete the product if they decide to stop its production,
- get notified when someone makes an order containing their product.

Also for the customers the functionality of

- search products based on its name, description and company name that they belong to,
- see the products grouped by the category,
- save the product in favorite list or cart for future orders,
- ordering products from the cart, specifying the address they will be delivered at
- see the information about the order status

The project is executed using html/css/js for frontend and spring boot for backend. Spring Security with JWT token stored in cookies is used for secure authentication. Spring Data with PostgreSQL is used to manage database interactions, configuring PostgreSQL through Spring Boot's properties.
